Muhammad Shayan Khan

Aspiring Software Engineer | Frontend Developer

mshayankhan8688@gmail.com
Portfolio · GitHub · LinkedIn

PROFILE

Software Engineering student focused on responsive, user-friendly web interfaces. I build frontend pages with React, Next.js, and TypeScript. My final year project is a restaurant system, and the other portfolio pages are frontend demos. The restaurant repository also includes Express, MongoDB, and Django.

EDUCATION

Bachelor's Degree — **2022 – 2026**
University of Management and Technology (UMT), Lahore

FSc — **2020 – 2022**
Forman Christian College (FCC), Lahore

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS

Restaurant repository: Node.js, Express, MongoDB, Python, Django

Tools: Git, GitHub

SELECTED PROJECTS

AI Driven Restaurant Management System — Final year project

React · TypeScript · Vite · Tailwind · Node.js · Express · MongoDB · Django

- Built the restaurant frontend: menu, cart, kitchen display, and dashboard. Live demo is this React app.
- The same repository includes Express and MongoDB routes for orders, plus Django routes for forecast, waste, sentiment, and chat. Those services are in the code, not a separate live site.

Storefront Demo — Frontend demo

Next.js · React · TypeScript

- Built a store page where a shopper can browse products and manage a cart. Checkout stays on the page and does not take payment.

API Console Demo — Frontend demo

Next.js · React · TypeScript

- Built a page that sends a sample request and shows the JSON response. It is not a deployed API.

Dashboard Demo — Frontend demo

Next.js · React · TypeScript

- Built a page of sample results with search and a bar view. It does not scrape websites.
